HOW TO REPLY TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.

If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is the same, pay the TOTAL FEE(S) DUE shown above.

B. If the status above is to be removed, check box 5b on Part B - Fee(s) Transmittal and pay the PUBLICATION FEE (if required) and twice the amount of the ISSUE FEE shown above, or

If the SMALL ENTITY is shown as NO:

I. In the Specification:

Please amend the paragraph 60 on page 22 of the specification as follow:

[0060] As noted above, in some embodiments code 215 may correspond to one or more of the software modules illustrated in FIGS. 1 or 2. In the illustrated embodiment of computer system 200, code 215 resides in memory 210. Memory 210 may be one embodiment of a computer-accessible storage medium configured to store program instructions and/or data such as included in code 215. However, in other embodiments, the program instructions and/or data included in code 215 may be received, sent or stored upon different types of computer-accessible media. Generally speaking, a computer-accessible medium may include a computer-accessible storage medium ~~media~~ or a computer-accessible memory medium ~~media~~ such as magnetic or

optical media, e.g., disk or CD-ROM included in some embodiments of computer system 20 as mass storage device 250. A computer-accessible storage medium may also include volatile or non-volatile media such as RAM (e.g. SDRAM, DDR SDRAM, RDRAM, SRAM, etc.), ROM, etc, that may be included in some embodiments of computer system 20 as memory 210. Further, a computer-accessible medium may include transmission media or signals such as electrical, electromagnetic, or digital signals, conveyed via a communication medium such as network and/or a wireless link, which may be included in some embodiments of computer system 200 as network interface device 260.

II. In the Claims:

Please amend claims amend claims 1-10 and 19 as follow:

Claim 1. (Currently amended) A hardware system, comprising:

a plurality of hardware computing devices configured to implement;

a computational resource;

a plurality of applications configured to utilize said computational resource;

a metering utility configured to measure utilization of said computational resource by a given one of said plurality of applications; and

a cost model configured to allocate a first portion of a cost of said computational resource to said given application dependent upon said measured utilization of said computational resource by said given application;

wherein to allocate the first portion of the cost, the cost model is further configured to:

determine a total available capacity of said computational resource; and compute a unit cost for said computational resource from said total available capacity and a cost share assigned to said computational resource.

Claim 2. (Currently amended) The hardware system as recited in claim 1, wherein said cost model is further configured to allocate a second portion of said cost of said computational resource to said given application as a fixed cost not dependent upon said measured utilization of said computational resource by said given application.

Claim 3. (Currently amended) The hardware system as recited in claim 2, wherein said first and second portions total one hundred percent of said cost, and wherein subject to said totaling, said first and said second portions each comprise from zero percent to one hundred percent of said cost.

Claim 4. (Currently amended) The hardware system as recited in claim 1, wherein said cost model includes direct and indirect costs of providing said computational resource.

Claim 5. (Currently amended) The hardware system as recited in claim 1, wherein said computational resource is one of a plurality of computational resources,

and wherein said cost model is further configured to distribute at least a portion of a total cost of providing said plurality of computational resources among said plurality of computational resources, such that each of said computational resources bears a respective cost share of said at least a portion of said total cost.

Claim 6. (Currently amended) The hardware system as recited in claim 5, wherein said cost model is further configured to:

determine a respective total available capacity of each of said computational resources; and

compute a respective unit cost for each of said computational resources from said respective total available capacity and said respective cost share.

Claim 7. (Currently amended) The hardware system as recited in claim 6, wherein determining said respective total available capacity includes applying a respective expected resource utilization factor.

Claim 8. (Currently amended) The hardware system as recited in claim 1, wherein said first portion of said cost is dependent upon a quality of service of said given application.

Claim 9. (Currently amended) The hardware system as recited in claim 1, wherein said computational resource includes a processor, a storage device, or a network communication device.

Claim 10. (Currently amended) A method implemented on computer hardware, comprising:

a plurality of applications utilizing a computational resource;
measuring utilization of said computational resource by a given one of said plurality of applications; and
allocating a first portion of a cost of said computational resource to said given application dependent upon said measured utilization of said computational resource by said given application, wherein said allocating comprises:
determining a total available capacity of said computational resource; and
computing a unit cost for said computational resource from said total available capacity and a cost share assigned to said computational resource.

Claim 19. (Currently amended) A computer-accessible storage medium storing program instructions, ~~wherein the program instructions are executable~~ that when executed implement a method to:

~~implement a plurality of applications, wherein each of said plurality of applications is configured to utilize a computational resource;~~

measure utilization of ~~said~~ a computational resource by a given one of ~~said~~ a plurality of applications; and

allocate a first portion of a cost of said computational resource to said given application dependent upon said measured utilization of said computational resource by said given application, wherein to allocate the first portion of the cost, the program instructions are further computer-executable to:

determine a total available capacity of said computational resource; and
compute a unit cost for said computational resource from said total available capacity and a cost share assigned to said computational resource.
